This degree program provides hands-on and theoretical studies of automated robotic, mechanical, & electrical systems and the electronics (transistor circuits) used to control them. The course of study includes; Programmable Logic Controllers (PLC's), Human Machine Interfaces (HMI), sensor technology (instrumentation), pneumatics/hydraulics, solids modeling and robotics. Lab classes introduce the Digital Multi Meter (DMM), electronic test equipment, robots and robot programming, hydraulics/pneumatics, and solid modeling. As an elective the student can pursue an Internship with local industry for college credit, often providing a pathway to future employment.
